About Us

This is a training initiative to share our valuable experience and knowledge working in the field of Information Technology. The training programs here are in the domain areas of **Database**, **Enterprise Applications**, **Data Analytics**, **IT Security**, **Cloud Computing** and **Project Management**. This training involves Design, Develop, Integrate, Automate and Customize solutions specially in industrial areas of Automobile, Healthcare, Real-Estate, Retail, Investment and Government.

At **Learnmystuff** we offer personalized training on such niche technology products and services catered to those industries with Hands On practice and learning how to utilize technologies in real time.

Product Trailings

- ✓ Oracle Fusion
- ✓ Oracle E-Business ERP
- ✓ Oracle Database
- ✓ Oracle Primavera
- ✓ Oracle Integration Cloud
- ✓ Oracle Apex
- ✓ Power-BI
- ✓ AWS Solution Architect
- ✓ IT Security +
- ✓ Big Data

Corporate Training Partners

Oracle Database

One of the market leading robust databases which you can learn by creating your own data structure, manage the information you value the most also provide the best storage and optimum performance .Oracle database is the first database designed for enterprise grid computing, the most flexible and cost affective way to manage information and applications .Learning database programming is the first step towards learning about Oracle Database.

Topics Oracle Database

- Getting Started with Database Administration
- Creating and configuring Oracle Database
- Starting up and shutting down Database
- Managing Processes

In this training you shall be learning how to develop and create oracle applications using Oracle Forms and Reports 11g for on premise versions or Oracle Apex for cloud version along with learning to built extensive Reports using Oracle BI publisher. Learning to built data entry screens that can be extensively used for many purposes.

Topics Oracle Apex

- Application Pages and Regions
- Create New Application
- Create Page Wizards, Page Rendering
- Create Forms
- Create Reports
- Create Charts
- Create Maps
- Create Shared Components
- Create Dynamic Actions
- Linking between pages
- Create template
- Applying Themes and Templates to Application
- Changing Templates

Oracle Integration Cloud

Learning to integrate has become one of the most crucial part in the world of Cloud Information Systems due to the exponential growth of data and new systems being brought on board in-order to adapt with all the changing needs of people and business around us. Along with those changes, maintaining your legacy data and business functions also becomes a crucial part of adapting to new systems and that's where system integration plays a key role in bringing information and data from legacy to the new or keeping a centralized place, so that your work and business operations do not get hampered during this transformation.

Topics Oracle Integration Cloud

- Built Integrations
- Expose Integrations as REST/SOAP
- Built Connections
- Built REST/SOAP Service
- Invoke REST/SOAP/file/db/oracle erp cloud Service
- Switch, for, while, scope
- Monitoring
- FBDI
- BIP/OTBI
- File Import and Export
- Schedule Process
- Fusion Integrations
- Process Cloud Service
- Manual approvals
- Workflows

Power BI

Microsoft's Power BI is a suite of business intelligence reporting and data visualization products and services for individual and teams. Power BI stands out with streamlined publications and distributions capabilities as well as integrations with other Microsoft services.

Topics Power BI

- Introducing Power BI Desktop
- Connecting and shaping data
- Creating table relationships & Data Models
- Analyzing data and DAX calculations
- Visualizing data with Power BI Reports
- AI concepts

AWS Solution Architect

Jump into the world of learning Cloud services on AWS and get trained in becoming an AWS Solution Architect. An AWS solution architect designs, builds, deploys and maintains business applications also design critical infrastructure inside AWS cloud. These Solution Architects are the ones responsible to implement cloud technologies for customers. This training program is intended for anyone with one or two years of hands-on experience in the field of Information Technology and aspire to become a solution architect. The topics that will be covered during this training will be on the following topics.

Topics AWS Solution Architect

- IAM and AWS CLI
- EC2 Fundamentals
- EC2 Solution Architect
- EC2 Instance Storage
- High Availability and Scalability
- ELB and ALB
- RDS and Elastic Cache
- Route 53
- Amazon S3 introduction
- Databases in AWS
- Networking and VPC
- Disaster Recovery and Migrations

Oracle Primavera

- Managing compliance and operational Security
- Risk Management
- Managing Security Incidents
- Business Continuity and Disaster Recovery Plan

Big Data

With the amount of personal data available on individuals today, it is crucial that companies take steps to protect their data. A topic which has become a hot debate in today's online world. The increase in the amount of data available presents both opportunities and problems. So when you own more complex data sets especially from new data source. These data sets are so voluminous that traditional data processing software just can't manage them . There comes the need to use Big data.

Our Message

Learning is a necessity to catchup in today's fast changing world and learning to train is a skill well mastered. It was the thirst to share our work experience and provide quality transformative training that triggered me to start this initiative when in today's tech training industry, trainers with practical hands-on experience was a challenge apart from the standard norms of providing theoretical experience, **Learnmystuff** is here to bridge those gaps in learning and help you becoming a tech specialist serving organizational needs on time.
